DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1 & 3-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Crawford (US Patent Number 5,771,354).

Claims 1, 9, & 14: Fig 3 shows a server device (52), a display device (54) and a game-executing device (68). Game-executing device (68) is the CPU of computer (52). A "set top box" is merely a computer that is associated with the cable television system. Fig 4 shows computer attached to the disclosed communications system via a cable TV connection (134). Computer (50(Z)) is a "set top box". The server device has an information storage unit (64, 66) for storing game software. (Col 2, 15 & 16) Crawford discloses that game software may be sent to a computer via communications lines (150) that are external to the server device, display device, and the game executing device and stored on the information storage unit. (Col 3, 37-39) There is inherently an information transmitting means (the computer's bus) for reading software from the storage unit in response to a request received via digital communications line (the bus) and transmitting the information to the game-executing device. The game-executing device has game selection command input devices (56 & 58) and a game selection request transmission means (the bus) for transmitting the selection to the server. The keyboard (56) and

Art Unit: 3714

mouse (58) are game control input means. The computer's bus is an information request transmission means. The processor (68) is an information acquisition means and an image generation means and an image information acquisition means. There is a display device (54) for displaying images of the game.

Claims 3, 10, & 15: Crawford teaches a server that contains an additional information acquisition means (68) that gets additional information via a communications link (150) and stores it to the storage unit (66, 64). There is an additional information transmission means (bus). The game-executing device (50) has an additional information selection command input means (56) and an additional information request transmission means (80).

Claims 4, 11, & 16: Crawford teaches communication line connecting means (80) that is also an information request transmission means that transmits a request for desired information to the service provider via a communications line (150).

Claims 5, 12, & 17: Crawford teaches tracking, recording, storing, and updating usage history in order to perform accounting and billing. (Fig 8B, 414, 422, etc.) Recitation of a function includes teaching the hardware necessary to carry out that function.

Claims 6, 13, & 18: Crawford teaches communication line connecting means (80) that is also a usage history information transmission means that transmits a request for desired information to the service provider via a communications line (150).

Claim 7: Fig 4 clearly teaches a digital serial bus.

Claim 8: Fig 4 clearly teaches wireless communications channels.

Application/Control Number: 09/697,554

Art Unit: 3714

Claim Rejections - 35 USC § 103

Page 4

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 2 & 19-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Crawford as applied to claim 1 (as appropriate) in view of Internet Explorer®.

Claims 2, 19, 23, & 24: Crawford teaches the invention substantially as described.

Crawford teaches use of the Internet (Col 3, 37-39) but does not teach details of its use nor does Crawford explicitly describe use of compressed image data. Internet Explorer® is a well-known, prior art, web browser. (Copyright 1991-2001) The Joint Picture Expert Group (JPEG) image format was developed at least as early as 1997. JPEG images are a common image format for the Internet, Internet Explorer® supports the display of JPEG images. JPEG images are stored and transmitted as compressed files. In order to display the images, Internet Explorer® must receive, decompress, synthesize and cause the images to be displayed. It would have been obvious to one of ordinary skill in the art at the time of the invention to have used Internet Explorer® to access the Internet in order to implement Crawford's disclosure concerning Internet use, thus giving the system the ability to process and display JPEG images.

Claim 20: Crawford teaches communication line connecting means (80) that is also an information request transmission means that transmits a request for desired information to the service provider via a communications line (150).

Page 5

Application/Control Number: 09/697,554

Art Unit: 3714

Claims 21 & 29: Crawford teaches tracking, recording, storing, and updating usage history in order to perform accounting and billing. (Fig 8B, 414, 422, etc.) Recitation of a function includes teaching the hardware necessary to carry out that function.

Claims 22 & 30: Crawford teaches communication line connecting means (80) that is also a usage history information transmission means that transmits a request for desired information to the service provider via a communications line (150). Transmission must be made in response to a usage history information transmission request or at a scheduled time.

Claim 25: Fig 13 shows an additional data acquisition step (521). Input, transmission, storage, reading, and processing steps are included in this step.

Claim 26: Fig 8A shows validating users (404A). Fig 13 clearly shows establishing communications, logging in, communication between game machine and server including request for information from the game software information provider.

Claims 27 & 28: Fig 13 (515, 520) shows an authentication step. If the customer has an account, information is provided to the customer (521). This implies an information permission transmission and reception step. Fig 8B discloses a billing step.

Claim 31: Fig 4 clearly teaches a digital serial bus.

Claim 32: Fig 4 clearly teaches wireless communications channels.

Response to Arguments

5. Applicant's arguments filed 6 October 2003 have been fully considered but they are not persuasive. The arguments are directed to the claims as amended and have been addressed above.

Art Unit: 3714

6. Essentially, Applicant argues that Crawford does not teach communications between components within a digital computer. This argument is without basis in fact. A digital computer cannot work without communication between the components thereof. All digital computers must contain a bus of some type in order to function.

7. Examiner will provide another copy of Examiner's Affidavit with this office action.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Computer Hardware, Information About the Computer Bus (http://computerhope.com/help/bus.htm) gives information about the function of the computer's bus.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Corbett B. Coburn whose telephone number is (703) 305-3319. The examiner can normally be reached on 8-5:30, Monday-Friday, alternate Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tom Hughes can be reached on (703) 308-1806. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-1148.
